

Popp-Open Pull Tab Security

Win Guard® is a Popp-Opens® Pull Tab profit protection and anti-counterfeit system.

Win Guard should be used to validate instant winning pull tab tickets on the higher dollar payout tiers. A randomly generated 4-6 digit security code appears on a winning ticket, near a winning symbol combination. Winners should be verified by matching this security code to the appropriate code printed on the Win Guard verification sheet. The Win Guard sheet is included in each deal of Capital Game Popp-Opens.

The cash payout, ticket serial number and Win Guard number (on applicable top tiers) should be used to validate all winning tickets before prize payment.

Protect your profits with these security features:

1 WINNING COMBINATION

Match the combination of symbols on winning tickets that corresponds to the tiers listed on the front of the ticket to determine the prize amount.

2 SERIAL NUMBER

Each deal contains a unique serial number.

3 WIN GUARD

A protection system that verifies top winning tickets by matching a security code on valid winning tickets to a security sheet unique to the deal.

4 CASH PAYOUT

Displays the dollar amount on all winning tickets, showing players exactly what they've won.
